

Hello everyone! We would like to start by welcoming “Spring”. We are all excited to receive this new season that brings along warm weather, birds singing and buds sprouting everywhere. Our students are eager to spend more time outdoors enjoying the warm days of spring.

We just couldn’t wait for this to happen!

Children in our class continue to be busy working and learning new things every day. The enthusiasm they have is contagious. As part of learning about spring and the changes in the weather, our class has worked on a few science experiments. About a week ago we planted “tulips” and “lima beans”. We talked about what seeds and plants need in order to grow and how we can provide that in our classroom. We are also learning about the parts of plants and flowers. As the days go by, our students have begun to enjoy the tulips growing and the first sprouts of the beans. If you have some time, please stop by for a few minutes and check them out. Your child will be happy to show them to you.

There is so much more to share. Future newsletters will keep you informed of what we are working on and the new things we are learning.

Happy Spring!!

Mrs. Keefe, Ms. Teresa and Ms. Liz
